STOKELEIGH CAMP
Leigh Woods, Bristol

ST 559733

Cat. Ref. K8

Iron Age

STOKELEIGH CAMP

Leigh Woods, Bristol.
Introduction

A trio of camps dominates the southern end of the Clifton Gorge of the Bristol Avon. On the right bank is Clifton or Observatory Camp. It has triple banks and ditches, close set together. Scoops are seen on the inner side of the inner bank. No worthwhile excavations have been made in it. Hollows, dubbed hut circles, were filled up when the Observatory was built. It is undated save by analogy. Presumably of Iron Age date. Roman coins occur in slip material inside the camp suggesting occupation lasting till after the Roman conquest. The entrance is probably in the north east sector. Part of the defences have been destroyed by quarrying. It is an immensely strong site but the inner ~~parts~~ enclosure is quite small.

On the left, or Somerset bank, are, from south to north, Bowerwalls or Burgh Walls Camp abutting on the south side of

Nightingale Valley. It had triple ramparts and ditches now all but totally destroyed by houses. Remnants of the north end of the banks exist at the lip of the south side of the cliffed Nightingale Valley. Remnants of the outer and inner bank exist inside the grounds of Burwalls House but the central bank is not seen there. It is possible that the central bank was of different construction to the other two and was of the "Murus Gallicum" or timber laced type. Evidence for this is not good. The site is not level as there is a steep slope down from north to south. The south ends of the ramparts, which are closely set, abut on the Clifton Gorge. They form a rough semicircle.

The third camp is Stokeleigh Camp, a true promontory fortress. On the south it ends over Nightingale Valley and on the north against another steep valley running up from the Avon. There is a major inner bank and ditch outside, but no evidence of scoops inside. This bank and ditch turn back along the side of Nightingale Valley. The bank is topped by a

dry stone wall, presumably part of a rampart walk. The entrance is probably on the north at the edge of the second valley. The outer bank and ditch are slighter and could be of later date than the inner. On the north it is close set to the inner bank but is slighter at the south at the west edge of a wide platform. The outer bank straddles the spur and does not return along the flank. Beyond the outer bank is an even feebler third bank and ditch spaced a little way forward. This runs only part way across the spur and then turns out to the west away from the camp. (See Haldane. 1967, PUBSS Vol.11,(2) Stokeleigh Camp).

Trial sondages indicated occupation within the inner rampart over a considerable area. (1966). Larger excavations in 1967 were made at cutting JJ00, and a partial cutting was made from inside into the inner rampart. To the south cutting "D" was made and in the eastern half of this two layers of occupation were found. Work is still in progress (1968)

THE CATALOGUE.

The individual objects are then numbered consecutively under each head. e.g. fifth human bone would be $\frac{K8+1}{5}$ or $K8.1/5$

100th piece of pot. $\frac{K8.7}{100}$ or $K8.7/100$

[In sondage J00 (3) is equivalent to (5) in area D
 = basal dirty red layer above clean natural]

Stokeleigh Camp

Copy of letter from Mrs. Frances Neale May 3rd 1972

The Knoll, Winscombe Hill, Winscombe, Somerset BS25 1DG

Dear Dr. Tratman,

In case you have not already come across it for yourself, I wondered whether you would be interested to know that I have found references to Stokeleigh and to "les Bourwalles by name in 1333. They are ~~an~~ named as features delimiting an area of woodland in a property deed (Bristol ArchivezOffice, ref.no. 5163(200)). There is no description of them as earthworks - indeed, Stokeleigh may of course just be the name of the area; but it shows that the names were in use at that date, and that writers were aware of "les Burwalles" at least as a construction. I can provide an abstract of the deed if you want, though I do not think it will add anything archaeologically.

Yours sincerely

signed Francis Neale

found by Dr. R. Everton amongst animal bones

6 Part of Lt Temporalis

This section of the catalogue was started in the expectation that the number recovered would be ~~small~~ small. The ~~quantity~~ ^{quantity} recovered was quite large but most of the bones were very fragmentary. The bones were grouped into areas and layers and were not individually catalogued. Dr. R. Evertan has examined and reported upon the bones and they are stored under areas and layers, ~~in~~ and sorted into species and bagged separately. The y have not been individually numbered

on exhibit 11/5/70

Remnant of bone object, pierced with 2 (3?) holes.

length is 10.5 cm
average diameter is 4.5 cm

The pottery has been catalogued by several different persons at different times. Some of the cataloguing has been well done. Some of it has not been well done. These ^{records} records are grouped on sheets that follow on after K8.7/964. This group of records has been termed the 'Abortive Catalogue.AC.' From this group W.H. has abstracted some specimens and has recatalogued them under the same number and the record has been put into its proper place.

The outcome of the varied persons work has been to produce gaps in the sequence of numbering. This has been set out in the tables on sheets **3-6** at the beginning of the pottery section.

Warner Haldane divided the pottery under Fabric Types, A - H. In his catalogue the following abbreviations were used:-
 R = Rim, B = Body, BS = Base, D or Dec = Decorated
 Colours:- B = Black, G = Grey, R = Red, Bf = Buff, O = Orange, Y = Yellow
 Surfaces:- Int = Interior face, Ext = Exterior face, Mid * Middle or Interior of body, Lt = Light, Dk = Dark, Med = Medium.

All the data, except the drawings, on W.H.'s catalogue cards have been taken off and entered in RED on the equivalent sheets in this catalogue. For W.H.'s 'P' substitute K8.7. The numerator is the same in both cases.

STOKELEIGH POTTERY

K8.7

The following list records the catalogue numbers of pottery described by J. Warner Haldane . All numbers are to be considered to have the prefix K8.7 In a few cases JWH has recorded two specimens under the same number and in these cases the number has a suffix e.g. 865(2). Where there are more than two items under one number the suffix takes two forms, e.g. 887.0 - 887.5 or 812 (a) - 812(h).

Numbers thus 247(255) indicates that the sherds belong to the same pot.

The areas for which pottery is recorded are : D,A and J. A is the trench cut partly through the inner rampart

Some of the small sherds of no diagnostic value have been discarded. Those discarded did not have any record of type of fabric. No decorated ware was discarded and no ware with Fabric type recorded was discarded.

Metal objects

Warner Haldane has described these under the code letter M. There are cards for each item except, surprisingly, M1. His M numbers follow in the same sequence as the K8.8 numbers, e.g. M20 + K8.8/20. Layer numbers in circles.
