LOCATION

REFERENCES

In the catalogue where the material available is coloured transparencies mounted as 2 x 2 inch lantern slides are certain reference numbers. Those prefixed by the letters EKT indicate that a duplicate is available in the private collection of Mr. E.K. Tratman, Penrose Cottage, Burrington, Near Bristol. Those prefixed by the letters UBSS indicate that the colour transparency was given that number in the simple numerical catalogue of colour transparencies of the society.

Certain cross references are given between the balcka and white prints and slides and the colour transparencies.

LOCATION

REFERENCES

The number of such cross referenc~~ies~~es is quite small. It should be noted that they refer to identical or very nearly identical views of the excavations. There are in fact quite a number more views both in colour and black and white which are fairly similar but not exactly so.

There are also available in the collection of E.K. Tratman additional colour transparencies. These are listed with his catalogue number and brief descriptions on the following sheets.

In eastern quadrant of south circle a largeish stone is situated on the crest of the bank. This stone was investigated and the cutting carried down to the ditch. This excavation is known as bank cutting 3. The stone was placed in its present position, to which it was restored after temporary removal during the excavations, after the bank was partially in ruins and after, therefore, the ditch had largely silted up. The stone rested on some exceptionally large ones of the stone core of the bank, the core re-appearing here. Under the stone was a hole, hopelessly disturbed by burrowing animals. Practically on the base of the ditch was a thin hearth. The stone is the one numbered 2 in Proc. 1957; Vol. 8. No. 1 Pl. 5A

These photographs cover the 1958 excavations of the entrance to the most southern of the Friddy Circles. In this series the two stone holes and the ritual pit are shown filled with a lining of polythene. Bay South 1 is seen cut into the bank and the set of postholes along the inner side of the bank and partly round the entrance end of the east side are shown. The causeway pit is shown in various stages of excavation. The cobbling has been removed from the causeway but its original site is indicated by the slightly hollowed out part of the natural subsoil. The cobbling covered the causeway pit but where the cobbling ended and the stone filling of the pit began could not be differentiated. This set of photographs are all by Dr. H. Taylor.
